Gross leg exposure

This line chart displays the performance of a trading strategy for two short positions, CONI and COIN, over time. The y-axis represents the value of the trades, and the x-axis represents time. The chart includes several data series:

- CONI short gross** (solid green line): Shows the gross trades for the CONI short position.
- COIN short gross** (solid purple line): Shows the gross trades for the COIN short position.
- total gross** (dashed teal line): Represents the sum of the gross trades for both positions.
- beta-adjusted ETF gross** (dotted teal line): Shows the gross trades after adjusting for beta.
- model rebalance** (dashed blue line): Indicates the rebalancing of the model.
- actual ETF trade** (solid red line): Shows the actual trades for the ETF.
- actual underlying trade (shared)** (dotted red line): Shows the actual trades for the underlying assets, which are shared between the two positions.

The chart illustrates the volatility of the trades and the effectiveness of the model in capturing the underlying trends. The model rebalances are shown as vertical dashed lines, and the actual trades are shown as solid lines. The shared actual underlying trade is shown as a dotted red line.

Hedge ratio over time

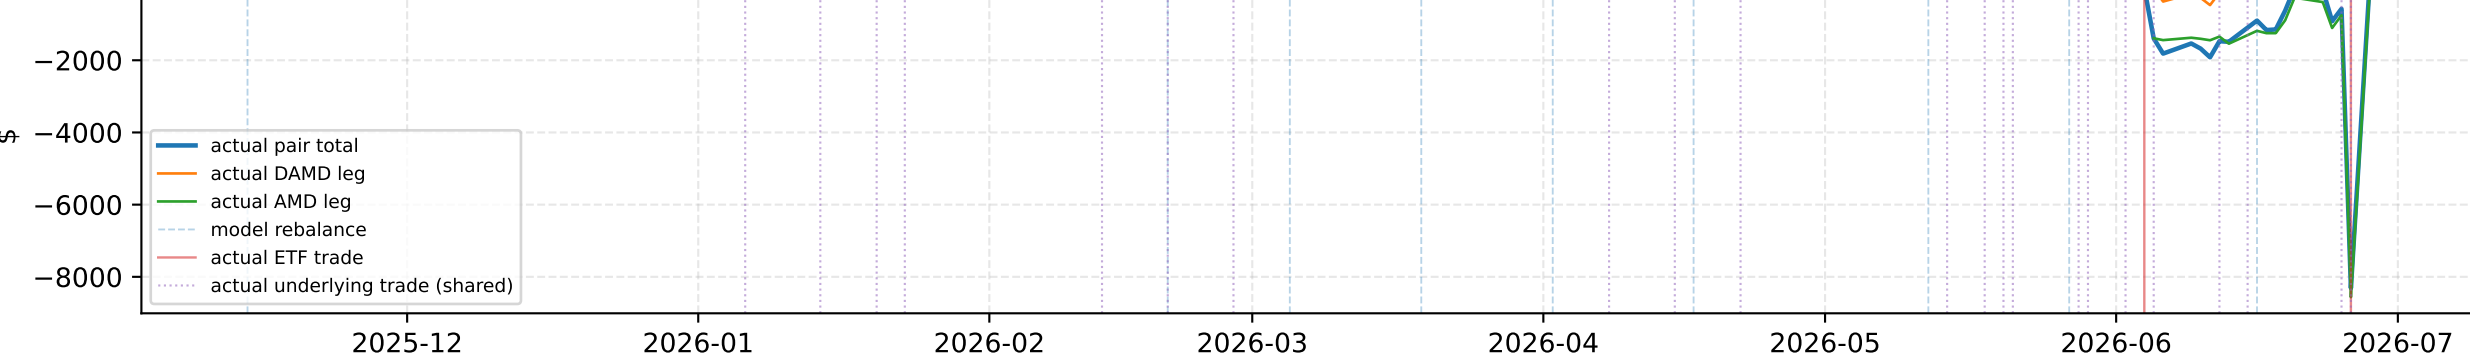

Underlying price and rebalance/trade markers

The chart displays four data series over time from October 2024 to July 2026. The 'COIN adj close' (solid black line) shows a general upward trend with significant volatility, peaking around mid-2025 and then declining. The 'model rebalance' (dashed blue line) shows a series of vertical steps, indicating periodic rebalancing events. The 'actual ETF trade' (solid red line) and 'actual underlying trade (shared)' (dotted red line) are both shown as vertical lines, indicating specific trade events. The 'actual ETF trade' is visible as a solid red line, and the 'actual underlying trade (shared)' is visible as a dotted red line.
